in the tradition of the affluent society and bowling alone a book that will redefine the way americans think about themselves for decades to come america may

be more diverse than ever coast to coast but the places where we live are becoming increasingly crowded with people who live think and vote as we do we ve built a country where we can all choose the neighborhood and church and news show most compatible with our lifestyle and beliefs and we are living with the consequences of this way of life segregation our country has become so polarized so ideologically inbred that people don t know and can t understand those who live just a few miles away the reason for this situation and the dire implications for our country is the subject of this groundbreaking work in 2004 journalist bill bishop made national news in a series of articles when he coined the phrase the big sort armed with original and startling demographic data he showed how americans have been sorting themselves over the past three decades into alarmingly homogeneous communities not at the regional level or the red state bluestate level but at the micro level of city and neighborhood in the big sort bishop takes his analysis to a new level in a brilliantly reported book that makes its case from the ground up starting with stories about how we live today and then drawing on history economics and our changing political landscape to create one of the most compelling big picture accounts of america in recent memory

the present book outlines a new approach to possibilistic clustering in which the sought clustering structure of the set of objects is based directly on the formal definition of fuzzy cluster and the possibilistic memberships are determined directly from the values of the pairwise similarity of objects the proposed approach can be used for solving different classification problems here some techniques that might be useful at this purpose are outlined including a methodology for constructing a set of labeled objects for a semi supervised clustering algorithm a methodology for reducing analyzed attribute space dimensionality and a methods for asymmetric data processing moreover a technique for constructing a subset of the most appropriate alternatives for a set of weak fuzzy preference relations which are defined on a universe of alternatives is described in detail and a method for rapidly prototyping the mamdani s fuzzy inference systems is introduced this book addresses engineers scientists professors students and post graduate students who are interested in and work with fuzzy clustering and its applications

this book provides the reader with a basic understanding of the formal concepts of the cluster clustering partition cluster analysis etc the book explains feature based graph based and spectral clustering methods and discusses their formal similarities and differences understanding the related formal concepts is particularly vital in the epoch of big data due to the volume and characteristics of the data it is no longer feasible to predominantly rely on merely viewing the data when facing a clustering problem usually clustering involves choosing similar objects and grouping them together to facilitate the choice of similarity measures for complex and big data various measures of object similarity based on quantitative like numerical measurement results and qualitative features like text as well as combinations of the two are described as well as graph based similarity measures for hyper linked objects and measures for multilayered graphs numerous variants demonstrating how such similarity measures can be exploited when defining clustering cost functions are also presented in addition the

book provides an overview of approaches to handling large collections of objects in a reasonable time in particular it addresses grid based methods sampling methods parallelization via map reduce usage of tree structures random projections and various heuristic approaches especially those used for community detection
